

## WSTIMS For Windows Fix List

Status	Priority	Program Version	Component	Issue	Notes
Closed	L	4.0.0.9	Running Order	Asterisk for RO would be great. Judge forms don't need. Scorer form something would help. CC would know not for placement from setup, but event scorer would not know. A visual clue would be helpful.	Place asterisk in order cell when ReadyForPlcmt is N. Also added Plcmt: N to judge forms. Put ** in placement cell for event summary
Closed	L	4.0.0.9	Event Summary	Asterisk for forms and reports, but 999 for WSP file only. Can you reserve the asterisk to equal 999 in background?	Place asterisk in order cell when ReadyForPlcmt is N. Also added Plcmt: N to judge forms. Put ** in placement cell for event summary
Closed	H	4.0.0.9	Trick Calc	When OOC is used but there is 1 or more trick after the trick marked OOC there are 2 message boxes being displayed with the same message	Determined that the update processing was being executed twice inadvertently
Closed	H	4.0.0.9	Trick Calc	If the first trick of a pass is out of course and is marked OOC then the score will not calculate. Work around is to mark the trick as "Before"	
Closed	H	4.0.0.9	Slalom Entry	My son, Jake Galante, ran 15 MPH LL, then ran 17 MPH LL, then went inside 1 ball at 19, total score is 12 buoys, which should read 'zero at 19', but the results printed 'zero at 17'. I've heard similar things have happened when skiers opted up, it displayed the correct score, but wrong details about speed and line length. Denise Goldman was Chief Scorer. The total score appears correct no our end. Brandy Nagle	Determining the final pass for speed and line length did not take into account a score of zero on the last pass. This has been corrected
Closed	H	4.0.0.9	Tournament Package	Would like a warning when more than 1 chief official has been assigned	It seemed that this was happening frequently and while allowed it seemed like more often It might have been unintentional
